

# GOKUL SARASWAT

Bangalore, Karnataka

☎ +91-9829086012 ✉ gokulsaraswat07@gmail.com 📧 gokulsaraswat 🌐 gokulsaraswat </> gokulsaraswat

## Professional Summary

Backend Engineer with three years of experience architecting high-availability microservices for enterprise banking. Proficient in Java 8/17, Spring Boot, and SQL with expertise in Core Banking Systems (CBS), EOD/payment migrations. Proven track record of minimizing transaction latency, optimizing system performance, and building real-time financial services.

Experienced in building reporting services and handling complex regulatory compliance integrations that helped stakeholders improve smoother operations and real business impact. Owns the end-to-end SDLC from API design to production deployments and RCA, delivering scalable solutions that drive data-driven decision-making.

## Technical Skills

**Languages:** Java 8/17, SQL (Oracle), PL/SQL, C++, Python, JavaScript

**Frameworks/Tools:** Spring Boot, Oracle JET(OJET), Knockout.js, JUnit, Mockito, Cline, Putty, WinSCP

**APIs & Architecture:** RESTful APIs, SOAP, Microservices, JWT, OAuth 2.0

**Cloud/DevOps:** Kubernetes, Docker, AWS, GCP, OCI, Weblogic, Flyway, Git, Grafana, Prometheus, Linux, Postman

**Domain Specific:** Flexcube, Oracle BIP Server, OBX Tool, RAD

**Certifications:** Oracle Java 8-25, Oracle DB/SQL, GDSC Cloud Track

## Work Experience

### Oracle Financial Services Software

3 Years

Associate Consultant

Bangalore, India

- Designed and implemented a **Report Microservice** to aggregate complex transactional and audit data from Oracle BIP using optimized SQL, delivering Base64-encoded PDF/Excels output via Spring Boot REST APIs.
- Integrated reporting services as virtual layers in **Oracle Banking Microservices Architecture (OBX)** using OJET, designing dynamic menu hierarchies for custom enterprise banking modules.
- Engineered end-to-end backend integrations and WebLogic server optimizations, decreasing API transaction latency by **30%** across multiple global banking rollouts.
- Formulated **30+ RESTful APIs** utilizing a standardized microservices configuration, mitigating system integration friction and ensuring atomic transactional behavior.
- Delivered Tier-3 production support for high-availability banking apps, resolving **100+ critical production bottlenecks** (Root Cause Analysis) to maintain a **98% system uptime**.
- Managed End-of-Day (EOD) batch processing and data migration for 1 year of historical core banking transactions, guaranteeing **99.9% data integrity** and zero cutover loss.

### Devsnest

Feb 2023 – July 2023

SDE Intern

Bangalore, India

- Developed a React-JS frontend featuring Firebase Authentication & Redis caching, reducing application latency by 30%.
- Contributed to an Agile team of 5, ensuring timely sprint deliveries and high-quality feature implementation.

## EDUCATION

### BMS Institute Of Technology and Management

August 2019 – June 2023

BE in Information Science and Engineering

Bangalore, India

## Personal Projects

### Real-Time Scheduler | Java, Multi-threading, Concurrency

Sep 2022 – Dec 2022

- Developed a real-time task scheduler using Java thread pool and concurrent collections, consistently processing 50 tasks/second.
- Implemented a Priority Blocking Queue to manage and scale up to 1,000 concurrent tasks without race conditions .
- Simulated a priority based preemptive scheduling algorithm, reducing high-priority tasks response times by **50%** with 100% deadline adherence.

## Achievements

- **3-Star Coder at CodeChef** (Max Rating: **1414**) with over 500 problems solved on platforms like LeetCode, CodeChef, and GeeksforGeeks
